Dear Reader,

I love Nature – and I am certainly not the only one. We enjoy Nature and we can find relaxation, tranquility and inspiration here. Symrise brings you closer to Nature in your day-to-day life: with our extensive BOTANICALS collection of natural ingredients for beauty and care.

You would be amazed to know just how frequently you can come into contact with our Botanicals – and thus with valuable ingredients from all over the world. Shea butter is one of them. Known as “women’s gold” in its native Africa, shea butter has been traditionally used in skin care for centuries. Today, shea butter enhances modern body creams all over the world for skin that is wonderfully soft and supple.

Ginger root is a popular and esteemed ingredient in Asian cooking and medicine; in our Botanicals, we capture its beneficial effects for use in skin care. In products like after-shave balms ginger is able to soothe irritated skin. Rooibos from South Africa has been proven to protect the color of hair and shows also anti-aging and skin soothing properties. Aloe vera, translated literally, means “effective cure”, and is a modern classic and rightly a sought-after ingredient for skin care products. In after-sun products, especially, you can enjoy its cooling, moisturizing effect.

But you can also encounter fruits among our Botanicals: tropical passion fruit in shower gel, for instance, turns every shower into a stimulating experience; and the Brazilian acai berry can be found in products like shampoos because of its smoothing, protecting and nurturing properties.

With Botanicals, you have Nature’s diversity at your fingertips – and I could give you plenty more examples. For me, personally, Botanicals combine the best of two worlds: they stand for the beauty and sensuality of Nature and, thanks to extensive research, equally for its beneficial effects.

We work constantly to explore new valuable ingredients of plants sourced from all over the world – both new discoveries and those in traditional use – for skin, hair and body care products. This brochure provides an insight into our portfolio, which is as diverse – and sometimes also as surprising – as Nature itself.

Get in touch with Nature: Symrise Botanicals.

Yours truly,
Gabriele Vielhaber
(Senior Vice President Life Essentials / Global Head Cosmetic Ingredients)

A close-up photograph of a potted mint plant. The leaves are vibrant green, serrated at the edges, and have a prominent vein pattern. The background is softly blurred, showing more of the plant and its container.

**More than 60 years of experience:
Botanicals by Symrise**

Our established line of Extrapone® was introduced as the first line of plant extracts that could be readily incorporated into any kind of cosmetic formulations – and that was back in the 1950s. Today, Symrise is a global market leader in this segment and Symrise’s Actipone®, Extrapone®, Fruitapone® and Flowerpone® are behind the success of leading cosmetic brands all over the world.

From the heart of nature, for the benefit of the consumer:

Symrise Botanicals

Decades ago we have identified **nature** as the most powerful source of inspiration and ingredients. Today plant extracts are a core competence of Symrise – thanks to our profound expertise and more than 60 years of experience in developing, producing and marketing high quality natural products. Symrise Botanicals stand out for their versatility, ease of use and reliable high quality and enable you to promote your products with consumer-friendly labels such as Natural, Organic, Fair Trade or Sustainable. They can be signature ingredients and inspire whole new brands and product lines.

To fulfill the individual needs of **consumers** and customers alike, our research and product development teams cooperate with partners from around the world, always looking for new ideas and developing inspiring, trendy products.

Our clear understanding of consumer needs and expectations combined with careful market observation and trend analysis results in innovative botanicals that are refined by advanced extraction and standardization technologies, often backed up by in-vitro data and always complemented with the highest standards in technical documentation and marketing support.

We are a leading global supplier of **botanicals** to the cosmetics industry and we strive to be always one step ahead in order to be prepared for the ever-growing requirements. Thanks to our global network and our complementary sales channel SymSelect® we are available around the world and 24/7.

NATURE

- Global sourcing
- Organic
- Sustainability
- Traceability
- Standardization on main compounds/active principle

RESEARCH

- Natural raw materials
- Biological degradability
- Renewable resources
- Activity screening
- Plant identification
- Standardization

FOCUS

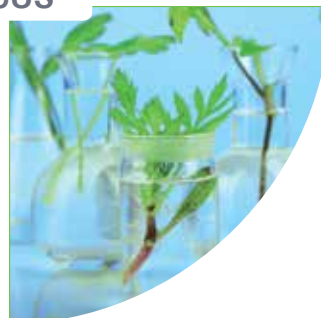

CONSUMER

- CMI database
- Marketing
- Trend analysis
- Product positioning
- Regional preferences
- Creative concept development

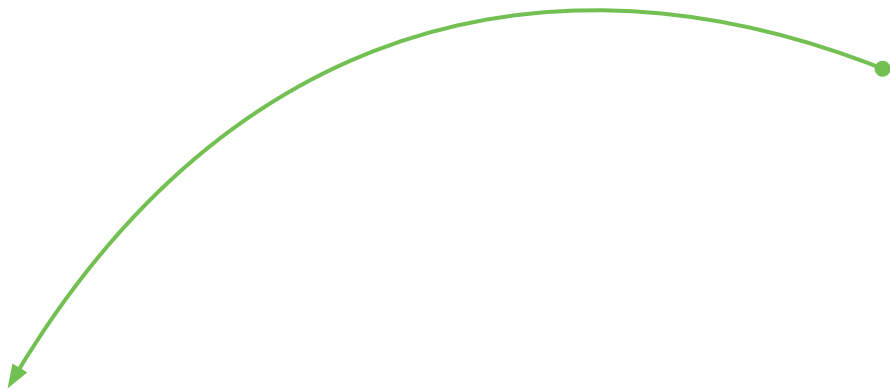

DEVELOPMENT

- Customer oriented solutions
- Stability testing
- Close collaboration with production
- Impurity & olfactory check

Product Groups

83%

of global consumers need to keep in touch with nature*

Actipone®

The Actipone® range consists of highly effective plant extracts for skin and hair care and covers a variety of natural, mainly standardized products with proven in-vitro efficacy confirmed by Symrise's R&D.

Extrapone®

Extrapone® is a range of aqueous glycolic preparations of natural plant extracts, covering a great variety of traditional and exotic plants.

Extrapone® GW

Extrapone® GW is a range of glycol-free products based on glycerin and water. The glycerin is of plant origin and proven to act as additional skin moisturizing agent.

Extrapone® Milk

Symrise Extrapone® Milk offer a combination of valuable milk components and natural plant essences. The addition of Hydrolite® 5 provides an excellent long-term moisturizing effect.

Fruitapone®

Fruits provide wholesome and nutritive substances for skin and hair. Fruitapone® contain natural fruit essences enhanced with the anti-irritant properties of bisabolol (Fruitapone® B) and antioxidant green tea (Fruitapone® GT).

Flowerpone® / Flowerconcentrole®

Without being a perfume, Flowerpone® and Flowerconcentrole® provide an unobtrusive

smell in cosmetic products and are able to mask base odors.

The products are preservative-free and contain bisabolol as a tracer.

Phytoconcentrole® / Plant Oils

Oil-based plant extracts keep the skin smooth and induce the formation of a natural protective film. Phytoconcentrole® are lipophilic plant extracts based on triglycerides and with added stabilizers to prevent oxidation. Plant oils are pure lipid plant extracts.

Certified Organic Range

Allplant Essence, Extrapone® and Actipone® include extracts from organically grown plants. The Allplant Essence range consists of 99+% certified organic colorless products, based on a special distillation process of fresh plants. The organic Actipone® and Extrapone® products are based on concentrated plant extracts, prepared in vegetable glycerin and water or organic maltodextrin as carrier substance.

Colorless Products (CL)

Aqueous plant extracts which meet the cosmetic industry's needs for colorless and clear products are indicated as CL.

Powders

The abbreviation "Neo" in a product name indicates products in powder form.

Our Collections

Ayurveda

Actipone®/Extrapone®

The Indian Ayurveda philosophy came into being about 5000 years ago. It aims at achieving psychological and physical harmony. Using herbs, flowers, essential oils and minerals, Ayurvedic cosmetics bring the skin to its own perfect balance. For the selection of Ayurvedic plants such as **amla, noni, nutgrass, bel** or **Indian berberine**, Symrise cooperated with Dr. Chandrakant Basole, an experienced consultant who studied Ayurvedic medicine and is an expert in phyto medicine.

Chinese Mushrooms

Actipone®/Extrapone®

Chinese mushrooms are a key ingredient in Traditional Chinese Medicine (TCM). Symrise offers several varieties for the use in cosmetic products, such as the famous **shiitake, coriolus** also called “turkey tail”, or **auricularia** (wood fungus or ear fungus, an allusion to its rubbery ear-shaped growth); **reishi**, one of the oldest mushrooms known to have been used in medicine, and **grifola frondosa**, better known by its Japanese name **maitake** – the “dancing mushroom”.

Gemstones

Extrapone®

The magical and therapeutic power of gemstones is deeply rooted in traditional medicine and popular belief: each gemstone has its own unique characteristics, its value and use. Symrise’s gemstones (Ecocert Greenlife approved) consist of gemstone powders and vegetable glycerin. Adding **crystals, diamonds** or **pearls** to cosmetics will enhance the value and image of beauty products and turn them into something truly precious.

Healthy Grains

Actipone®/Extrapone®

Grains are mainly composed of carbohydrates, proteins, lipids and mineral salts. They are an amazing source of energy, vitamins and fibers which makes them highly suitable for skin and hair care products. The healthy grains collection containing **amaranth, barley, kamut, millet, oat, quinoa, rice, rye, spelt and wheat**

recognizes the nutritional wealth of grains, some of which even show excellent antioxidant properties.

Marine Range

Actipone®/Extrapone®

The underwater world is full of fascinating life forms and raw materials. From different varieties of **seaweed** and **algae** to **precious stones, sea silt, sea salt** or **oyster shells**: the oceans and the deep sea are a source of inspiration – and a source of valuable, effective ingredients for the cosmetic industry. Be ready to dive in our inspiring marine collection supported by interesting proven anti-aging, skin soothing, and antioxidant data.

Superfruits

Actipone®

Superfruits such as berries stand for a combination of power, efficacy and color. They combine exceptional nutrient richness, antioxidant quality and an appealing scent and taste. The powerful antioxidant properties of superfruits make them an ideal ingredient for skin and hair care products. Discover our exciting range of popular fruits such as **blueberries, cranberries, elderberries, sea buckthorn** or **pomegranate** and exotic new ones such as **amla, aronia, camu camu, noni** or **goji berries**.

Superveggyies

Actipone®

Vegetables protect the cells from oxidation and deliver many indispensable nutrients to humans. Due to their rich levels of antioxidants, fibers, vitamins, carbohydrates and mineral salts, they are essential for a healthy diet. So why not take advantage of these benefits in cosmetics? With superveggies **artichoke, asparagus, beetroot, pumpkin** and **zucchini**, Symrise unlocks the antioxidant potential of vegetables for skin and hair care applications.

Sustainable Shea Butter

In Africa the use of shea butter for skin care concentrates mainly on its healing and protecting properties against the harsh climate. Clinical studies have confirmed the anti-aging, moisturizing,

skin soothing and softening properties which make shea butter a valuable and trusted skin care ingredient all over the world. The sustainable business model of Symrise in Northern Ghana is based on age-old traditions of handmade techniques. Only premium nuts are processed without the use of any chemicals. Symrise Shea Butter is available in certified Fair Trade and Organic quality.

TCM

Actipone®/ Extrapone®

The knowledge of herbs is deeply rooted in Traditional Chinese Medicine. More than 7000 types of herbs with healing benefits have been documented for thousands of years. For the selection of plants for the TCM collection, Symrise cooperated with the experienced consultant Professor Guixin of the Shanghai University of TCM. Learn about the properties of **angelica, ginger, honeysuckle, licorice, pueraria** and **sophora** – to name a few.

Exotic Waters

Extrapone®

For ages, water has been a symbol of purification, renewal and recovery. It is the source of life and of health. In a world of urbanization concerns and climate issues, it also answers our ever-increasing need for freshness and hygiene. In beauty care, thermal water and floral waters stand for wellness and purity; in skincare, water is associated with moisture, hydration and healthy youthful looks. Join us on our world tour to explore our collection of exotic waters from places like **Fiji, Patagonia** or **New Zealand**.

Into the Woods

Actipone®

Wood is a popular natural and sustainable material. Until today, it has been a symbol of strength, naturalness and longevity. But wood is also an amazing source of beauty constituents, from niche fine fragrances to private label personal care products. Our wood extracts contribute to the nature-tech trend and have shown impressive activities from anti-aging and antioxidant to skin firming, soothing and hair color protecting. In the range are **ash, honey locust, sweet cherry** and **walnut tree wood**.

ALMOND

Did you know that almonds belong to the rose family (Rosaceae)? We humans have been growing almond trees for over 4000 years.

Product List

LAVENDER

The origin of this plant's name is lavare, the Latin for "wash" – and aptly so, given that fragrant lavender has a long tradition in skin care.

Name Latin name	Properties Literature, <u>in-vitro</u> data	Number	Product name

SHEA BUTTER

Shea butter is known as “women’s gold” in its native Africa, where it has been used in beauty treatments for centuries.

Symrise shea butter is sustainable, fairly traded, certified organic, and sourced in Ghana. The shea butter project there helps to improve the economic situation of women in the poorest region of Ghana so that they can support their families and obtain access to health services and schools for their children.

Assay Description

for **in-vitro** data

ANTI-AGING

Glutathione

This cellular assay is performed with human immortalized keratinocytes (HaCaT). The assay is based on the fluorometric properties of monochlorobimane (mBCI). This dye penetrates into living cells and reacts with glutathione. A high amount of glutathione leads to a high fluorometric signal.

Sirtuin

This cellular assay is performed with normal human dermal fibroblasts (NHDF). An antibody, that carries a fluorescent dye specifically binds to the sirtuin protein. The amount of color is proportional to the amount of sirtuin protein.

Collagen

This cellular test is performed with normal human dermal fibroblasts (NHDF). The assay is based on the dye Sirius red, which specifically binds to the helical structure of fibrillar collagen and can be detected by photometric measurement.

MMP1 und 9

In this cell-free assay, MMP enzyme activity is measured spectrophotometrically with the aid of the following kits:

MMP-1 Biotrak Activity Assay (GE Healthcare/Amersham), RPN2629

MMP-9 Biotrak Activity Assay (GE Healthcare/Amersham), RPN2634

ANTI-IRRITANT

IL-1 alpha

This cellular assay is performed with human immortal keratinocytes (HaCaT). Cell lysates are taken for the quantification of IL-1 alpha using ELISA technique. IL-1 alpha content is detected by photometric measurement.

COX-2

In this cell-free assay, the enzyme-activity of cyclooxygenase-2 is used to convert arachidonic acid to PGH₂. Driven by this reaction, the co-substrate ADHP is converted to the strongly fluorescent product resorufine. The measured content of resorufine is proportional to the COX-2 activity.

PGE₂

This cellular assay is performed with normal human dermal keratinocytes (NHEK). Supernatants are taken for the quantification of PGE₂ using competitive ELISA technique. PGE₂ content is detected by photometric measurement.

ANTIOXIDANT

DPPH

Based on the stable violet radical 2,2-diphenyl-1-picrylhydrazyl (DPPH). Reduction of this radical by antioxidants results in decolorization which can be measured spectrophotometrically.

ABTS

Based on the reduction of the relatively stable blue/green 2,2'-azinobis-(3-ethyl-benzothiazoline-6-sulfonate) (ABTS) radical cation. Antioxidants convert it into a colorless product.

DCF

This cellular test is performed with normal human dermal fibroblasts (NHDF) and is based on the intracellular conversion of dichlorofluorescein diacetate (H₂DCF-DA) into the fluorescent dichlorofluorescein (DCF) in the presence of reactive oxygen species.

HAIR COLOR PROTECTION

Colored hair strands are treated with the dissolved active ingredient, dried and stressed by UV irradiation. Then color protection is calculated by comparison of the color before and after stressing of the hair.

SKIN BRIGHTENING

Melanin

This cellular test is performed with B16V mouse melanoma cells. After the lysis of the cells the melanin content can be detected by photometric measurement.

Tyrosinase

The assay is based on a controlled oxidation of L-tyrosine to dopachrome by the enzyme tyrosinase. The colored dopachrome can be detected by photometric measurement.

SKIN FIRMING

Adipogenesis

Adipogenesis is performed on confluent 3T3-L1 preadipocytes. Using special differentiation medium preadipocytes differentiate to adipocytes. Formed lipid droplets can be stained and measured using fluorescent Nile Red.

Lipogenesis

Based on the hydrolysis of 4-methylumbelliferyl-oleate to 4-methylumbelliferon by lipase. The fluorescent character of the product enables a quantification of the lipase activity.

Lipolysis

Glycerol release is tested on confluent differentiated 3T3-L1 cells. Glycerol of the supernatant reacts to quinoneimine dye using some coupled enzyme reactions. Increase of absorption is proportional to the concentration of free glycerol.

A natural choice for the
**benefit of the
consumer**

Efficacy List

as described in literature
in-vitro data available

ANTI-AGING

Acai	Ivy
<u>Aloe Vera</u>	Kiwi
Amla	<u>Laminaria Saccharina</u>
