EXPERTISE IN COLORS

Sensient Cosmetic Technologies
is committed to developing, producing and marketing quality ingredients and colorants to the cosmetics industry. At our global production facilities, we manufacture the finest colorants and functional cosmetic ingredients for Make-up, Skin care, Hair care, Personal hygiene, Oral care, Fragrance.

Consistent quality
All manufactured batches undergo rigorous testing to guarantee consistency, purity and reliability, to ensure our products meet our customers’ strict demands.

Regulatory support
With our knowledge of cosmetic ingredient regulations, use limits and labelling requirements, we assist our customers with manufacturing and product development needs.

Technical expertise and Application Laboratories
Our well-equipped technical service laboratories are staffed by experienced cosmetic technologists available to assist you in all technical needs. We promise efficient, accurate and innovative solutions to your most pressing development questions.

Customer service
Our customer department provides fast and courteous responses to pricing, availability and order tracking. We constantly stand by our customers’ side with:
• Innovation
• Technical expertise
• Formulation development

Contact our sales team to enjoy our innovations and high performance products.

Cosmetic Dispersions

Mineral and organic pigments can be pre-dispersed in a liquid medium to improve their introduction in cosmetic finished products without grinding. Cost-effective solution for customers, Sensient’s expertise offers many standard ranges of dispersions in aqueous or oily phase, dedicated to various applications (lipstick, foundation, mascara, soap or toothpaste).

Main benefits
- Ready-to-use dispersion / Easy dispersibility
  Use of cosmetic dispersions is cost-effective, i.e. eliminates any additional milling problems (investment, production and cleaning cost, losses, quality control...).
  No dust, no milling required.
- High purity
  Based on high purity pigments, cosmetic dispersions offer low level of heavy metals and impurities.
- Full coloring strength achievement
  The dispersion only requires a slow rotating propeller and does not take more than 3 minutes.
- Better stability
  Our cosmetic dispersions are produced through performing milling equipment, producing a high pigment content, free from aggregates above 5 µm.

Levels of use
Dispersion levels of use may vary according to the nature of the pigment and the intensity of the required shade.

Regulations
The pigments used in our dispersions are all cosmetic grade pigments that comply with the European Cosmetic Regulation 1223/2009/EU (follow purity criteria 231/12/EU for food grades), and/or FDA regulations.
FDA regulations do not allow the use of the certified batch number of the pigments in the final dispersions. For more details on regulatory issues, please contact our technical support.

Stability / Storage
Our dispersions should be stored in closed containers and at room temperature. We advise to always stir all cosmetic dispersions just before use. Under normal storage conditions, the shelf life of cosmetic dispersions is 2 years (excepted for specific sensitive products with a lower shelf life – official information are mentioned on each MSDS).

The group of products presented in this brochure will enable the user to obtain the best possible results from the standpoint of tints and general suggested use. However, we would recommend that users of our products carry out all necessary tests to determine their suitability for use in a given formulation.
