

Active ingredients for Compact Powders

Competition is harder and harder. Cosmetic companies are differentiating their make-up products adding the advantage of **active ingredient treatments**.

These active ingredients can counter-act the drying effects of color particles on the skin, or provide extra source of energy. The skin is treated while still colored with a **non aggressive** make-up.

BIOSPONGE LINE

BIOSPONGE is a cosmetic compound based on spherical/oval micro particles of an average homogeneous size (5 to 20 μm), loaded with different active ingredients.

This mechanism allows having a time release delivery at compact powder formulations.

BIOSPONGE HYDRACYL

Moisturizing treatments for dry, rough and lacking elasticity skins.

PROPERTIES

- Natural moisturizer: reproduces the skin's NMF
- Hydro-retention e Hydro-regulator
- Restrains the dehydration without occlusive effect
- Improves the flexibility and softness of the skin
- Restructures the cutaneous micro-relief

BIOSPONGE GLYCOENERGIZER

Energy source to help skin's defence and repair. Improves the metabolic activity of skin cells.

PROPERTIES

- Restores the energetic reserves of the epidermis
- Reinforcing agent of the capacity of the epidermal defense and repair
- Substantive hydro-regulating, softening, emollient of the stratum corneum.

OTHER LIPO-SOLUBLE ACTIVE INGREDIENTS FOR COMPACT POWDERS

BIO-CERAMIDYL PURE

Perfect ingredients for sensitive, atopic skins

It is a natural, highly purified Ceramide. Ceramides are key molecules of the epidermis for maintaining moisture and integrity of the cutaneous barrier

PROPERTIES

- Insure the cohesion of corneocytes and take part in the regular renewal of keratinocytes.
- Key role in the cutaneous barrier function.
- Participate at the water holding capacity of the stratum corneum.
- Acts as environmental protector

INCA OMEGA OIL

Poly-Unsaturated Fatty acids are essential to preserve the barrier function in the skin. The oil extracted from the seed of Plukenetia Volubilis is a powerful botanical source of Omega 3, 6 and 9. It has also a high content in delta and gamma tocopherols. It can be used as an aglutinant for compact powders.

PROPERTIES

- Reduction of Transdermal Water Loss.
- Improvement of normal Barrier Function of the Skin.
- Normalization of Keratinization Process.
