

Winter Cares

Historically, VIPs and royals knew they have to follow some guidelines to keep their beauty intact during winter season.

The dry atmosphere, cold and wind of this season are factors that can cause the appearance of skin problems such as irritation or redness.

The skin needs hydration and protection because the epidermal barrier is fragile, and the best allies will be formulas containing hyaluronic acid to promote absorption of water, to reinforce collagen tissue, and antioxidants (vitamins C and E) to neutralize the free radicals. Use creams for sensitive skin and specific treatments for lips and hands, but above all do not forget the sun protection factor.

Hyaceramidyl

It is a complex that combines anhydrous (water free) Sodium Hyaluronate with Squalane and Ceramides in a liposome form. These three precious components have been entrapped by a hi-tech process, maximizing their activities and allowing the high penetration of the ingredients into the deeper skin layers

Lipo-Ceravit C

Liposomes made with pure Ceramides, loaded with a high concentration (20%) of Vitamin C. The small size of the liposome allows the high penetration of non-degraded Vitamin C, with a high anti free-radicals activity. It stimulates the skin collagen production. Ceramides also improve the skin's barrier function

Bio-Ceramidyl Pure

Concentrated and highly purified glucosylceramides, analogous the ceramides of human skin, combined to a lesser proportion of cholesterol and phospholipids. Ceramides repair and strengthen the epidermal barrier, keeping and restoring the lipidic and ceramidic bilayers. It renews the cohesion of intercellular spaces, strengthening the cohesion of the horny layers

Omega Butter

This ingredient is made with 70% of Inca Omega Oil, extracted from the seed of Sacha Inchi (*Plukenetia volubilis*), a Peruvian Amazonia plant, with a high content in Omega 3, 6 & 9 and also tocopherols; and 30% of triglycerides of Olive Oil. PUFA's are essential to maintain the barrier protection in the external layers of the skin so it is a great ingredient for sensitive skins

Oceovital GAG

It is a combination of GlycosAminoGlycans and Glycogen in a powerful Polysaccharides compound. GAGs are homologous to the ones founded in the skin. It improves the tone and turgor of the skin. It is emollient, softener and filmogenic, making the skin more comfortable, and stimulates the metabolic processes of skin cells and its oxygen consumption. Soother and moisturizer

Dragon's Blood LP

Combination of exceptional botanical ingredients like Shea Butter and Argan Oil, with an extract obtained from the latex of the tree *Croton lechleri*, with multiple beneficial properties for lip care treatments. It helps wound contraction and regenerates the skin by promoting collagen formation. A great help for cracked and damaged lips
