

Wet Wipes

The use of wipes starts in the cradle (baby wipes) and continues in life

Modern life has changed our lives dramatically. Probably starting with disposable diapers and razors, new production systems make that to produce a new product is cheaper than to repair the used, old one. It is a common place to talk about the “throw-away culture” and all its disadvantages (waste, pollution, lose of value) but it is also true that convenience has arrived to our life to stay. What we need, we need it now. It is the same within Cosmetic Industry where wet wipes have became one of the healthiest sectors, increasing numbers and different uses and proposing more sophisticated products.

Different wet wipes

- Make-up removal
- Nail polish removal
- Cleaning wipes
- Peeling wipes
- Moisturizing wipes

Pore Reductyl

It is a purified, concentrated active, extracted from the pulp of *Fomes Officinalis*, a mushroom that grows in East Europe on the trunk of Alerces.

PORE REDUCTYL is a pore refiner for oily and mixed skins. It is a natural astringent containing agaric acid that overcomes all excessive secretion, smoothing, tightening and moisturizing the skin. Because all these properties, *Fomes Officinalis* Extract is very used in cleansers, toners and Micellar waters. It is also a great ingredient for wet wipes because its immediate cleansing effect.

Chiaprotect

CHIAPROTECT is a cold pressured extra virgin botanical oil, extracted from the seeds of *Salvia hispanica*, historically called "Chian" or "Chia".

Its calming, anti-inflammatory and anti-redness effect (shown in an efficacy test) makes it perfect for oily wipes
